

Pasted code(13).js

JavaScript

This is FormLeadEnquiry.js Here when I submit a lead reference number is generated I want to add the copy icon beside it so that when user clicks that copy icon the lead reference number generated is copied to the clipboard and then the user can paste wherever he wants accordingly

Pasted text(10).txt

Document

This is ViewLeadEnquiry.js I want to add the same copy icon functionality here in table as soon as the user clicks on the lead reference id in the table it must be copied to the clipboard and then the user can paste wherever he wants accordingly

Perfect. Instead of using alert(), you can use a professional Material UI Snackbar.

Update your ViewLeadEnquiry.js file like this

1. Import Snackbar & Alert

Add these imports:

```
import Snackbar from "@mui/material/Snackbar";
import Alert from "@mui/material/Alert";
```

2. Add Snackbar State

Inside your component add:

```
const [copySnackbarOpen, setCopySnackbarOpen] = useState(false);
```

Add it near your other useState declarations.

3. Update Copy Function

Replace your existing handleCopyLeadRef with this:

```
const handleCopyLeadRef = async (leadRefNo) => {
  try {
    await navigator.clipboard.writeText(leadRefNo);
    setCopySnackbarOpen(true);
  } catch (err) {
```

```
    console.error("Copy failed:", err);  
  }  
};
```

4. Add Snackbar Component

Add this near the bottom of your JSX, preferably just before:

`</Box>`

or before export.

```
<Snackbar  
  open={copySnackbarOpen}  
  autoHideDuration={2500}  
  onClose={() => setCopySnackbarOpen(false)}  
  anchorOrigin={{ vertical: "bottom", horizontal: "center" }}  
>  
  <Alert  
    onClose={() => setCopySnackbarOpen(false)}  
    severity="success"  
    variant="filled"  
    sx={{  
      width: "100%",  
      fontWeight: 600,  
      borderRadius: 2,  
    }}  
  >  
    Lead reference number copied  
  </Alert>  
</Snackbar>
```

Final Result

Now when user clicks the Lead Reference Number:

- ✓ Number copied to clipboard
- ✓ Snackbar appears at bottom:
- ✓ Lead reference number copied

- ✓ Snackbar auto disappears after 2.5 seconds
- ✓ Modern enterprise-style UX
- ✓ No annoying alert popup

This will feel much smoother and more professional for your CRM/Lead portal.

regenerate in proper steps

Follow these proper steps to add the Snackbar message:

- ✓ “Lead reference number copied”

after the user clicks the Lead Reference ID in your table.

STEP 1 — Import Snackbar and Alert

At the top of ViewLeadEnquiry.js, add these imports:

```
import Snackbar from "@mui/material/Snackbar";  
import Alert from "@mui/material/Alert";
```

STEP 2 — Add Snackbar State

Inside your component, add this state:

```
const [copySnackbarOpen, setCopySnackbarOpen] = useState(false);
```

Add it near your other useState() declarations.

Example:

```
const [confirmDeleteOpen, setConfirmDeleteOpen] = useState(false);
```

```
const [copySnackbarOpen, setCopySnackbarOpen] = useState(false);
```

STEP 3 — Add Copy Function

Inside ViewLeadEnquiry, add this function:

```
const handleCopyLeadRef = async (leadRefNo) => {  
  try {  
    await navigator.clipboard.writeText(leadRefNo);  
  
    // Open Snackbar  
    setCopySnackbarOpen(true);
```

```
} catch (err) {  
  console.error("Copy failed:", err);  
}  
};
```

You can place it near your other handlers like:

```
const handleSearchChange = (e) => setSearchTerm(e.target.value);
```

STEP 4 — Add Copy Icon Import

Add this import:

```
import ContentCopyRoundedIcon from "@mui/icons-material/ContentCopyRounded";
```

STEP 5 — Replace Lead Reference Number Cell

Find this existing code:

```
<Box  
  sx={{  
    display: "-webkit-box",  
    WebkitLineClamp: 2,  
    WebkitBoxOrient: "vertical",  
    overflow: "hidden",  
    textOverflow: "ellipsis",  
  }}  
>  
  {row[col.id]}  
</Box>
```

Replace it with this:

```
<Box  
  sx={{  
    display: "-webkit-box",  
    WebkitLineClamp: 2,  
    WebkitBoxOrient: "vertical",  
    overflow: "hidden",  
    textOverflow: "ellipsis",  
    alignItems: "center",  
  }}  
>  
  {row[col.id]}  
</Box>
```

```

>
{col.id === "leadReferenceNo" ? (
  <Tooltip title="Click to copy Lead Reference No">
    <Box
      onClick={(e) => {
        e.stopPropagation();
        handleCopyLeadRef(row[col.id]);
      }}
      sx={{
        display: "flex",
        alignItems: "center",
        gap: 0.7,
        cursor: "pointer",
        color: "#1565c0",
        fontWeight: 700,
        transition: "0.2s",
        "&:hover": {
          color: "#0d47a1",
          textDecoration: "underline",
        },
      }}
    >
    {row[col.id]}

    <ContentCopyRoundedIcon
      sx={{
        fontSize: 16,
      }}
    />
  </Box>
</Tooltip>
): (
  row[col.id]
)}
</Box>

```

STEP 6 — Add Snackbar Component

Near the bottom of your JSX, add this Snackbar component.

Place it before:

</Box>

or just before:

export default ViewLeadEnquiry;

Add:

```
<Snackbar
  open={copySnackbarOpen}
  autoHideDuration={2500}
  onClose={() => setCopySnackbarOpen(false)}
  anchorOrigin={{
    vertical: "bottom",
    horizontal: "center",
  }}
>
  <Alert
    onClose={() => setCopySnackbarOpen(false)}
    severity="success"
    variant="filled"
    sx={{
      width: "100%",
      fontWeight: 600,
      borderRadius: 2,
    }}
  >
    Lead reference number copied
  </Alert>
</Snackbar>
```

FINAL RESULT

Now when the user clicks:

LEAD-2026-00124 

the system will:

- ☒ Copy the Lead Reference Number
- ☒ Show Snackbar message:

✓ Lead reference number copied

- ✅ Auto-hide after 2.5 seconds
- ✅ Prevent row dialog from opening
- ✅ Give modern professional UX like CRM systems.

Auto-hide after 2.5 seconds ✅ Prevent row dialog from opening I want the lead id to be clickable no icon must be beside it in the table when i click particular lead id it must be copied and the view dialog must not appear on clicking the lead id

Perfect — now you want:

- ✅ Only the Lead Reference ID text clickable
- ✅ No copy icon beside it
- ✅ Clicking Lead ID copies it
- ✅ Snackbar appears
- ✅ Snackbar auto-hides after 2.5 seconds
- ✅ Row dialog must NOT open when Lead ID is clicked

Follow these exact steps in ViewLeadEnquiry.js

STEP 1 — Import Snackbar and Alert

Add these imports at the top:

```
import Snackbar from "@mui/material/Snackbar";
import Alert from "@mui/material/Alert";
```

STEP 2 — Add Snackbar State

Inside your component add:

```
const [copySnackbarOpen, setCopySnackbarOpen] = useState(false);
```

Place it near your other useState() declarations.

STEP 3 — Add Copy Function

Inside ViewLeadEnquiry component add:

```
const handleCopyLeadRef = async (leadRefNo) => {
  try {
    await navigator.clipboard.writeText(leadRefNo);

    // Open snackbar
```

```
    setCopySnackbarOpen(true);

} catch (err) {
  console.error("Copy failed:", err);
}
};
```

STEP 4 — Replace TableCell Content

Find this existing code:

```
<Box
  sx={{
    display: "-webkit-box",
    WebkitLineClamp: 2,
    WebkitBoxOrient: "vertical",
    overflow: "hidden",
    textOverflow: "ellipsis",
  }}
>
  {row[col.id]}
</Box>
```

Replace it with this:

```
<Box
  sx={{
    display: "-webkit-box",
    WebkitLineClamp: 2,
    WebkitBoxOrient: "vertical",
    overflow: "hidden",
    textOverflow: "ellipsis",
  }}
>
  {col.id === "leadReferenceNo" ? (
    <Tooltip title="Click to copy">
      <Typography
        onClick={(e) => {
          // Prevent row click dialog
          e.stopPropagation();

          // Copy lead reference number
```

```

        handleCopyLeadRef(row[col.id]);
    }}
    sx={{
        cursor: "pointer",
        color: "#1565c0",
        fontWeight: 700,
        transition: "0.2s",
        "&:hover": {
            color: "#0d47a1",
            textDecoration: "underline",
        },
    }}
>
    {row[col.id]}
</Typography>
</Tooltip>
): (
    row[col.id]
)}
</Box>

```

STEP 5 — Add Snackbar Component

Add this near the bottom of your JSX.

Place it before:

```
export default ViewLeadEnquiry;
```

Add:

```

<Snackbar
  open={copySnackbarOpen}
  autoHideDuration={2500}
  onClose={() => setCopySnackbarOpen(false)}
  anchorOrigin={{
    vertical: "bottom",
    horizontal: "center",
  }}
>
  <Alert
    onClose={() => setCopySnackbarOpen(false)}
  />

```

```
      severity="success"
      variant="filled"
      sx={{
        width: "100%",
        fontWeight: 600,
        borderRadius: 2,
      }}
    >
      Lead reference number copied
    </Alert>
  </Snackbar>
```

FINAL BEHAVIOR

Now:

- ✓ Lead ID appears as clickable text
- ✓ No icon shown
- ✓ Clicking Lead ID copies it instantly
- ✓ Snackbar appears for 2.5 seconds
- ✓ Clicking Lead ID does NOT open the View Dialog
- ✓ Clicking anywhere else on the row still opens the dialog

Example:

LEAD-2026-00125

(hover → underline effect → click → copied).
